

Areas of Expertise: AI

Napptilus develops AI software that provides assurances of quality, security and stability

- GEN AI**
- Automatic decoration
 - Artificial Art creation
 - Virtual Try-on

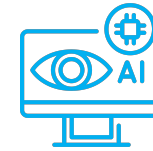

- AI**
- Virtual Assistants

Computer Vision

- Face Detection
- Face Tracking
- Face Recognition
- Object Recognition
- Advanced OCRs

Machine Learning and Analytics

- Data lake creation
- Data Science
- Data development
- Natural Language Processing

Providing end-to-end solutions to all data science needs by developing AI/ML systems

Areas of Expertise: AI

Napptilus utilises artificial intelligence to help its clients maintain a competitive edge

Expansion & Growth

- Identify **new opportunities** to expand their business models
- Assist **product development** by matching market trends and future demand predictions to ensure **product-market fit**

Finance

- AI can **assess** and **mitigate** risks by analyzing multiple data sources and identifying potential **threats** and **opportunities**

Direction & Strategy

- AI can **enhance decision making** accuracy with data analytics
- Helping businesses move **faster** by enabling **shorter cycles** and **reducing** the time it takes to move from one stage to the next

Marketing & Sales

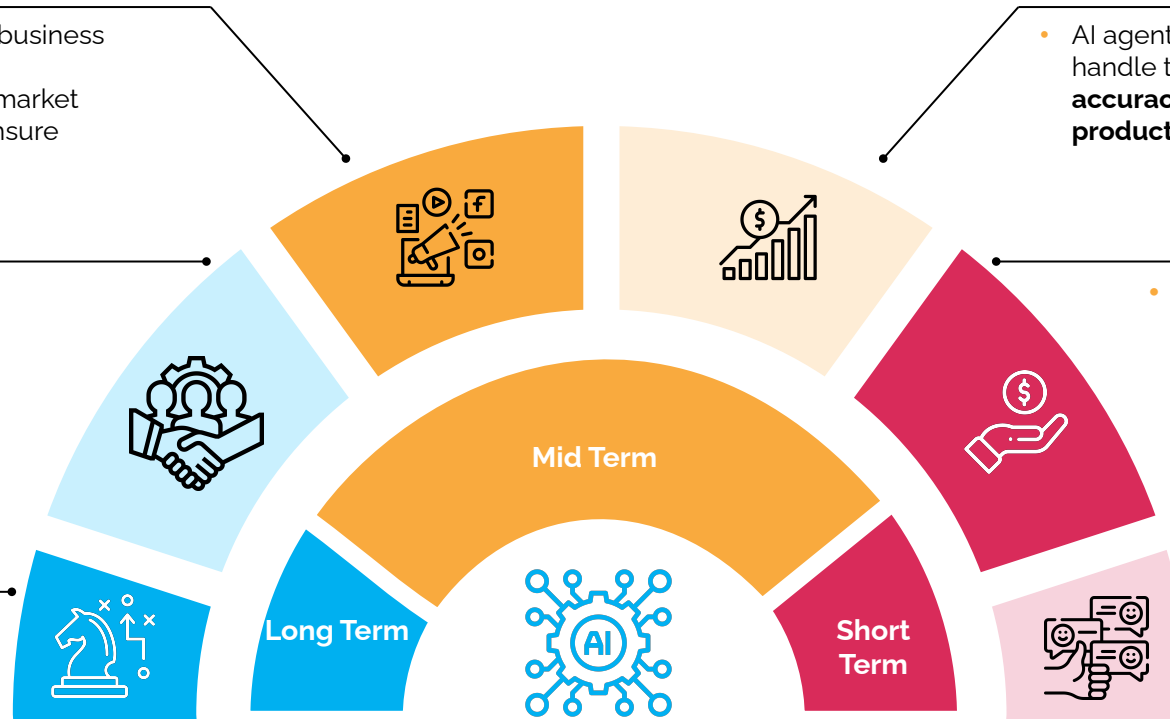

- AI agents enhance processes, allowing organizations to handle tasks at a greater **volume, velocity** and **accuracy** not possible without AI, leading to **efficiency, productivity** and **profitability** gains

Operations

- **Optimize** supply chain management and inventory control, leading to **cost savings** and improved **efficiency**

Customer-facing

- **Personalized** customer services and experiences to improve **customer retention**
- **24/7** Availability, AI-powered systems can operate **continuously**, offering round-the-clock services and support

Artificial Intelligence
The New Fuel For Businesses

AI provides a wide range of benefits to the end user including identifying new opportunities, optimizing operations and enhanced decision making
